

# Customer Behavior Analysis

## 1. Project Overview:

This project analyses customer shopping behaviour using transactional data from 3900 purchases across various product categories.

**Tools Used:** SQL, Python, Power BI

**Business Goal:**

The goal is to uncover insights into spending patterns, customer segments, product preferences, and subscription behaviour to guide strategic business decisions.

## 2. Dataset Summary:

- **Rows:** 3900
- **Columns:** 18
- **Key Features:**
  - Customer demographics (Age, Gender, Location, Subscription Status)
  - Purchase details (item Purchased, Category, Purchase Amount, Season, Size, Colour)
  - Shopping Behaviour (Discount Applied, Promo Code Used, Previous Purchases, Frequency of Purchases, review Rating, Shipping Type)
  - Missing Data: 37 values in review Rating column

## 3. Exploratory Data Analysis using Python:

We began with data preparation and cleaning in python:

- **Data Loading:** Imported the dataset using pandas.
- **Initial Exploration:** used `df.info()` to check structure and `.describe()` for summary statistics.

```
df.describe(include = 'all')
```

	Customer ID	Age	Gender	Item Purchased	Category	Purchase Amount (USD)	Location	Size	Color	Season	Review Rating	Subscription Status	Shipping Type	Discount Applied	Promo Code Used	Previous Purchases	Payment Method	Frequency
count	3900.000000	3900.000000	3900	3900	3900	3900.000000	3900	3900	3900	3900	3863.000000	3900	3900	3900	3900	3900.000000	3900	3

- **Missing Data Handling:** Checked for null values and imputed missing values in the Review rating column using the median rating of each product category.
- **Column Standardization:** renamed columns to snake case for better readability and documentation.
- **Feature Engineering:**
  - Created age\_group column by binning customer ages.
  - Created purchase\_frequency\_days column from purchase data.
- **Data Consistency Check:** Verified if discount\_applied and promo\_code\_used were redundant; dropped promo+code\_used
- **Database Integration:** Connected Python script to SQLite3 and created a database and load the data for SQL analysis.

## 4. Data Analysis using SQL(Business Transactions)

We performed structured analysis to answer key business questions:

1. **Revenue by Gender:** Compared total revenue generated by male vs. female customers.

	gender	revenue
0	Female	75191
1	Male	157890

2. **High-Spending Discount Users:** Identified customers who used discounts but still spent above the average purchase amount.

	customer_id	purchase_amount
0	2	64
1	3	73
2	4	90
3	7	85
4	9	97
...	...	...
834	1667	64
835	1671	73
836	1673	73
837	1674	62
838	1676	90

3. **Top 5 Products by Rating:** Found products with the highest average review ratings.

	item_purchased	average_rating
0	Gloves	3.86
1	Sandals	3.84
2	Boots	3.82
3	Hat	3.80
4	Skirt	3.78

4. **Shipping Type Comparison:** Compared average purchase amounts between Standard and Express shipping.

	shipping_type	round(avg(purchase_amount),2)
0	Express	60.48
1	Standard	58.46

5. **Subscribers vs. Non-Subscribers:** Compared average spend and total revenue across subscription status.

	subscription_status	total_customer	average_spent	total_revenue
0	No	2847	59.87	170436
1	Yes	1053	59.49	62645

6. **Discount-Dependent Products:** Identified 5 products with the highest percentage of discount purchases.

	item_purchased	discount_rate
0	Hat	50.0
1	Sneakers	49.0
2	Coat	49.0
3	Sweater	48.0
4	Pants	47.0

7. **Customer Segmentation:** Classified customers into New, Returning, and Loyal segments based on purchase history.

	customer_segment	number_of_customers
0	Loyal	3116
1	New	83
2	Returning	701

8. **Top 3 products per Category:** Listed the most purchased products within each category.

	item_rank	category	item_purchased	total_orders
0	1	Accessories	Jewelry	171
1	2	Accessories	Sunglasses	161
2	3	Accessories	Belt	161
3	1	Clothing	Pants	171
4	2	Clothing	Blouse	171
5	3	Clothing	Shirt	169
6	1	Footwear	Sandals	160
7	2	Footwear	Shoes	150
8	3	Footwear	Sneakers	145
9	1	Outerwear	Jacket	163
10	2	Outerwear	Coat	161

9. **Repeat Buyers & Subscriptions:** Checked whether customers with >5 purchases are more likely to subscribe.

	subscription_status	repeat_buyer
0	No	2518
1	Yes	958

10. **Revenue by Age Group:** Calculated total revenue contribution of each age group.

	age_group	total_revenue
0	Young-Adult	62143
1	Middle-aged	59197
2	Adult	55978
3	Senior	55763

## 5. Dashboard on Power BI

Finally, we built an interactive dashboard in Power BI to present insights visually.

## 6. Business Recommendations:

- Boost Subscriptions** – Promote exclusive benefits for subscribers.
- Customer Loyalty Programs** – Reward repeat buyers to move them into the “Loyal” segment.
- Review Discount Policy** – Balance sales boosts with margin control.
- Product Positioning** – Highlight top-rated and best-selling products in campaigns.
- Targeted Marketing** – Focus efforts on high-revenue age groups and express-shipping users.
